操作定義

The number of non-fatal occupational injuries per 100,000 labour force. They are obtained by: number of non-fatal injuries/total number of workers x 100,000 labour force.

備註

All figures are collected from Labour Department since 1981.

Futher to Labour Department (20Feb 2008), occupational injuries (including industrial accidents) are injury cases arising from work accidents, resulting in death or incapacity for work of over three days, and reported under the Employees' Compensation Ordinance. Since 1.1.1998, Labour Department has used the date of occurance of an injury as the basis for computing work injury statistics instead of the date of reporting in order to reflect more accurately the number of work injuries occurring in the year.
